Education

Northeastern University | Khoury College of Computer Science | Boston, MA Expected May 2028
B.S. in Computer Science and Philosophy | Minor in Economics **GPA:** 3.42/4.0
Relevant Coursework: Algorithms & Data | Program Design & Implementation | Foundations of Cybersecurity | Mathematical Foundations of AI

Skills

Languages: Python, Java, TypeScript, HTML/CSS, Solidity, OCaml, Racket
Frameworks & Technologies: Next.js, Tailwind CSS, PostgreSQL, Prisma, Supabase, Vercel
Developer Tools: Git, Codex, Claude Code, Linux, GitHub Copilot, Antigravity

Projects

KUSPACE | Product Designer & Full-Stack Developer October 2025 – June 2026

- Designed and developed a full-stack event-management MVP for nightclubs and event organizers as the **sole developer**, owning product requirements and **UI/UX design** across event creation, scheduling, ticket selling, DJ lineups, budgets, and guestlists.
- Built a **Next.js/TypeScript** frontend with reusable **Tailwind CSS** components and a **PostgreSQL/Prisma backend**, implementing CRUD operations, authentication, scoped access, and Stripe Connect Checkout with signature-verified webhook fulfillment for event ticketing.
- Used **Claude Code, Codex, and Antigravity** for AI-assisted product development, interface refinement, and backend CRUD implementation across the full-stack application.

Work Experience

Aldea Ventures | Product Designer & Full-Stack Developer | Barcelona May 2026 – August 2026

- Designed and built the **investor-reporting portal** as **sole developer** reporting directly to Managing Partner Andrew Padilla using React, TypeScript, and Supabase, creating an interactive alternative to static quarterly PDFs with detailed portfolio views, performance comparisons across quarters, and drill-down access to **1,000+ underlying companies across 28 portfolio funds**.
- Co-developed a simulator to model how different investment exit scenarios could affect portfolio holdings, investor distributions, and the fund's projected J-curve.
- Built **Excel-parsing and Airtable-ingestion software** to map reporting data into the platform and automate the generation of quarterly PDFs from updated figures and commentary.
- Contributed to Helios, Aldea's investment-intelligence platform, by fixing bugs, reconciling company records, and improving data mapping to support tracking across 1,200+ companies.
- Supported the migration of **30,000+ CRM records** from Affinity to Attio using Import2; organized and validated data, configured objects and views, and trained the team.

Interests

Tenor Saxophone, FPV Drone Piloting, AI Safety, Ancient Greek Philosophy, Calisthenics, Hiking, FC Barcelona.
